

Table 10. 2005 Fusarium head scab evaluation of variety test entries at Urbana.

Varieties with greater resistance have lower numbers.

These data on selected varieties from the U of I trials are from Dr. Fred Kolb's breeding program.

The test nursery was inoculated and mist irrigated. Three replications of 3' rows were evaluated.

Incidence = the percent of heads in a row with symptoms.

Kernel rating = the percent of shriveled seed (FDK).

Varieties with greater resistance have lower numbers.

Severity = the percent of spikelets in a head with symptoms.

FHB Index = incidence x severity/100.

ISK Index combines incidence, severity, and the % shriveled seed.
