WHEAT PERFORMANCE IN ILLINOIS TRIALS - 2013
Crop Sciences Special Report 2013-01, July 2013

Emerson D. Nafziger, Darin K. Joos, Ralph W. Esgar, and Brian R. Henry
Department of Crop Sciences, University of Illinois, Urbana

The 2012-13 wheat season was a reasonably good one in Illinois, with above-average yields but with some quality issues due to wet weather in the spring. Acres planted for grain increased from 645,000 acres in 2012 to 820,000 acres in 2013, and 2013 yield is projected at 65 bushels per acre, 2 bushels more than in 2012. The 2013 yield is the second-highest on record.

The very dry summer and fall of 2012 was relieved somewhat by rains (including remnants of a hurricane in early September) in August and September. The corn crop was very poor in most of Illinois, and was either harvested early or destroyed, so more than usual amounts of wheat followed corn. Some was planted earlier than normal, and access to nitrogen was above normal in many fields that were corn in 2012. With rainfall continuing through the fall and soybean harvest delayed, some of the crop was planted late as well. Stands were generally good, and fall growth was about average. The winter of 2012-13 brought average temperatures, with no mid-winter thaw. There was little damage from standing water or from cold temperatures. The crop greened up somewhat late and remained behind normal development through the spring. The weather remained wetter than normal throughout the spring. The crop was spared serious Fusarium head scab in much of southern Illinois, but not in much of central and northern Illinois. Harvest was delayed by late crop development and by wet weather, with much of the crop harvested and doublecrop soybeans planted in late June or early July.

The 2013 wheat variety trials were planted on time, under good soil conditions. The main factors that negatively affected yields were disease and delayed harvest, with some low test weights and quality issues. The trial at Urbana was somewhat affected by herbicide carryover from 2012, plus wet weather before harvest; data from this trial were supplied to companies but not included in the regional averages. Yields were average to good at southern locations and below average in central and northern Illinois trials.

Plots in these trials were seeded at the rate of 36 seeds per square foot, and consisted of six, 7.5-inch rows trimmed to about 17 feet long before harvest. There were three replications. Yields were corrected to 13.5% moisture. Entries treated with seed-applied insecticide have insecticide treatment identified by product name.

<u>Location</u>	<u>Cooperators</u>	<u>Soil type</u>	<u>Planted</u>	<u>N fertilizer</u>	<u>Harvest</u>
Dixon Springs	Steve Ebelhar	Grantsburg silt loam	Oct. 23	30 Fall 120 Spring	July 3
Belleville	Ron Krausz	Ebbert silt loam	Oct. 22	30 Fall 85 Spring	July 7
Brownstown	Lindell Deal	Cisne silt loam	Oct. 10	40 Fall 120 Spring	July 8
Orr Center	Mike Vose	Clarksdale silt loam	Oct. 3	45 Fall 80 Spring	June 27
Urbana	Bob Dunker Jeff Warren	Flanagan silt loam	Oct. 1	40 Fall 40 Spring	July 9
DeKalb	Greg Steckel Dave Lindgren	Elpaso silty clay loam	Sept. 25	30 Fall 40 Spring	July 18

Participating companies are listed on Page 2, regional data in Tables 1 and 2, individual location data in Tables 3 to 8, wheat variety characteristics in Table 9, and the Fusarium head scab ratings in Table 10.

Participating Companies

We thank these companies for their support of this program in 2013.

Codes:

Type:

V = variety; B = blend; H = hybrid

Maturity:

E = 2 or more days earlier than average; ME = 1-2 days early; M = medium maturity, or about average of most varieties grown in Illinois; ML = 1-2 days later than M; L = 2 or more days later than M

Head type:

S = smooth (not bearded); T = tip-awned; B = awned (bearded)

Winterhardiness and standability are rated fair (F), good (G), very good (VG) or excellent (E)

Plant height: S = short; M = medium; T = tall

Hessian fly and disease reactions: S = susceptible; R = resistant; I = intermediate;

MS = moderately susceptible; MR = Moderately resistant

2013 Fusarium head scab evaluation of variety test entries at Urbana.
Varieties with greater head scab resistance have lower rating or index numbers.
